

## Colorectal Cancer in Assembly District 19

*Colorectal cancer is preventable, treatable and curable*, yet thousands of Californians are suffering and dying from this disease.

This is completely unnecessary because *colorectal cancer screening is the most cost-effective cancer screening program* – more cost-effective than breast or prostate cancer screening. It is also far more cost-effective than colorectal cancer treatment.

Despite this, the majority of cases are diagnosed at a late stage, when the chances of survival are drastically reduced.

### Annual new cases of colorectal cancer among adults 50 years and older

	DISTRICT 19 (per 100,000)	CALIFORNIA (per 100,000)
Population Average	168.6	157.3
Men	200.6	187.7
Women	143.8	134.2
Non-Hispanic White	176.7	174.5
Black	154.4	207.4
Hispanic	185.1	137.5
Asian/Pacific Islander	157.2	148.5

### Late-Stage Diagnoses

	DISTRICT 19	AVERAGE
Percent diagnosed at Late Stage	57.4%	55.4%
Cases diagnosed at Late Stage	122	92

Source: California Cancer Registry; October 2007 incidence data 1998-2002; 2000 Census population at block level, age-adjusted to the 2000 US Population  
Late stage = regional or distant stage: cancer has spread beyond the colon
