

Colorectal Cancer in Assembly District 39

Colorectal cancer is preventable, treatable and curable, yet thousands of Californians are suffering and dying from this disease.

This is completely unnecessary because *colorectal cancer screening is the most cost-effective cancer screening program* – more cost-effective than breast or prostate cancer screening. It is also far more cost-effective than colorectal cancer treatment.

Despite this, the majority of cases are diagnosed at a late stage, when the chances of survival are drastically reduced.

Annual new cases of colorectal cancer among adults 50 years and older

	DISTRICT 39 (per 100,000)	CALIFORNIA (per 100,000)
Population Average	138.2	157.3
Men	166.5	187.7
Women	119.1	134.2
Non-Hispanic White	215.4	174.5
Black	226.5	207.4
Hispanic	119.8	137.5
Asian/Pacific Islander	165.8	148.5

Late-Stage Diagnoses

	DISTRICT 39	AVERAGE
Percent diagnosed at Late Stage	57.0%	55.4%
Cases diagnosed at Late Stage	61	92

Source: California Cancer Registry; October 2007 incidence data 1998-2002; 2000 Census population at block level, age-adjusted to the 2000 US Population
Late stage = regional or distant stage: cancer has spread beyond the colon
