

## Colorectal Cancer in Assembly District 51

*Colorectal cancer is preventable, treatable and curable*, yet thousands of Californians are suffering and dying from this disease.

This is completely unnecessary because *colorectal cancer screening is the most cost-effective cancer screening program* – more cost-effective than breast or prostate cancer screening. It is also far more cost-effective than colorectal cancer treatment.

Despite this, the majority of cases are diagnosed at a late stage, when the chances of survival are drastically reduced.

### Annual new cases of colorectal cancer among adults 50 years and older

|                        | DISTRICT 51<br>(per 100,000) | CALIFORNIA<br>(per 100,000) |
|------------------------|------------------------------|-----------------------------|
| Population Average     | 169.0                        | 157.3                       |
| Men                    | 198.0                        | 187.7                       |
| Women                  | 150.6                        | 134.2                       |
| Non-Hispanic White     | 208.3                        | 174.5                       |
| Black                  | 210.8                        | 207.4                       |
| Hispanic               | 122.2                        | 137.5                       |
| Asian/Pacific Islander | 178.3                        | 148.5                       |

### Late-Stage Diagnoses

|                                 | DISTRICT 51 | AVERAGE |
|---------------------------------|-------------|---------|
| Percent diagnosed at Late Stage | 54.6%       | 55.4%   |
| Cases diagnosed at Late Stage   | 80          | 92      |
