

Annual Deaths from Colorectal Cancer in Assembly District 80

64

Each year thousands of Californians die from colorectal cancer – a disease that is **preventable, treatable and curable**. In Assembly District 80, an average of 64 citizens die unnecessarily each year.

Screening saves lives, and should start at age 50 for those with no family history of the disease. Unfortunately, not everyone knows this, and many more do not have access to screening – **the most cost-effective cancer screening program**.

Anyone can get colorectal cancer, especially those over age 50. Everyone should have access to screening, but not everyone does.

Annual deaths from colorectal cancer among adults 50 years and older (per 100,000)

	DISTRICT 80 (per 100,000)	CALIFORNIA (per 100,000)
Population Average	51.5	58.1
Men	49.7	69.8
Women	52.4	49.7
Non-Hispanic White	62.7	64.0
Black	149.8	95.3
Hispanic	42.6	50.5
Asian/Pacific Islander	62.7	47.7
