

Annual Deaths from Colorectal Cancer in Assembly District 9

71

Each year thousands of Californians die from colorectal cancer – a disease that is **preventable, treatable and curable**. In Assembly District 9, an average of 71 citizens die unnecessarily each year.

Screening saves lives, and should start at age 50 for those with no family history of the disease. Unfortunately, not everyone knows this, and many more do not have access to screening – **the most cost-effective cancer screening program**.

Anyone can get colorectal cancer, especially those over age 50. Everyone should have access to screening, but not everyone does.

Annual deaths from colorectal cancer among adults 50 years and older (per 100,000)

	DISTRICT 9 (per 100,000)	CALIFORNIA (per 100,000)
Population Average	64.6	58.1
Men	79.4	69.8
Women	55.7	49.7
Non-Hispanic White	74.3	64.0
Black	112.2	95.3
Hispanic	61.9	50.5
Asian/Pacific Islander	37.0	47.7
