

Annual Deaths from Colorectal Cancer in Senate District 9

120

Each year thousands of Californians die from colorectal cancer – a disease that is **preventable, treatable and curable**. In Senate District 9, an average of 120 citizens die unnecessarily each year.

Screening saves lives, and should start at age 50 for those with no family history of the disease. Unfortunately, not everyone knows this, and many more do not have access to screening – **the most cost-effective cancer screening program**.

Anyone can get colorectal cancer, especially those over age 50. Everyone should have access to screening, but not everyone does.

Annual deaths from colorectal cancer among adults 50 years and older (per 100,000)

	DISTRICT 9 (per 100,000)	CALIFORNIA (per 100,000)
Population Average	58.5	58.1
Men	68.2	69.8
Women	51.4	49.7
Non-Hispanic White	62.4	64.0
Black	76.5	95.3
Hispanic	26.3	50.5
Asian/Pacific Islander	47.9	47.7
